vBound 4.0.1 – Release Notes
Release Date: 6/26/14

Enhancements

Feature/Function	Description
Inquiry	Updated interface to expand criteria options, including all 'Address' fields as required by ATF Ruling 2013-5.
Export Book	Added a function to export all acquisition and disposition records for the current book to an ASCII text file. Typically used for ATF upon discontinuance of an FFL.
Backup Reminder	Added a daily backup reminder feature. This reminder can be turned on or off by a user login with Administration permission.
Transfer On-Hand	Added ability to transfer all the on-hand items from one book to a different book. Disposes in the old book and acquires in the items in the new book.
Reports	Modified Acquisition List and Disposition List to be the same format.
Bound Book List	Added ability to double-click a book to open it.

Bugs/Fixes

Feature/Function	Description
Application	Various modifications to fix spelling errors, improve the look of a form/report, change wording, etc.
Application	The use of the apostrophe (') in some data fields caused errors. (e.g. FFL Name). Resolved in all applicable areas, including data entry and Inquiry.
Acquisition	The Acquisition form would only allow edits to the Serial Number or Manufacturer/Importer, and not the other Firearm fields on the Acquisition.
Acquisition	During Acquisition, when selecting a firearm from the Master Firearm List, the 'Description' would not be populated.
Acquisition	The Acquisition Completed dialog was not displaying upon the save of an Acquisition.
Inquiry	In the Correct/Void process, if the FFL or Customer listing was used to re-populate the disposition name and address, an error dialog appeared stating you needed to enter a value for Disposition Address 2.
Inquiry	Inquiry Detail report displayed the disposition name incorrectly as "Last Middle Last", corrected to "First Middle Last"
New Book	Program did not limit the characters user could enter into various data fields, and if exceeded, would give a non-descript generic dialog. Fixed for both a new book or creating a new book from eBound data.
Import List	Error generated if user clicked <Browse> button before entering a file format.
Reprints	Firearms Disposition selection displayed dispositions from all books rather than just the current book.
eBound Import	Modified conversion so that if a Vendor in eBound does not have an FFL#, it will be ignored and not cause the entire conversion to fail.
eBound Import	Modified conversion to handle invalid dates.
