

## vBound 4.0.3 – Release Notes

Release Date: 6/15/15

### Enhancements

Feature/Function	Description
ATF EZ Check Option	New option for adding an FFL by entering the FFL# and having vBound look the information up on the ATF EZCheck online system. If found, vBound will populate the information for the FFL. (Name, Address, Expiration Date)
FFL Expiration Date Validation	Added validation of the FFL expiration date to both Acquisition and Disposition. If an FFL is selected from the drop-down list has an Expiration Date entered and the current date is past the Expiration Date, the system will provide a warning dialog. The dialog allows the user to continue, cancel, or view the FFL detail so it can be edited.
Import List	Updated the data verification process with an additional check for duplicates within the data file being imported. System now stops the process and tells you which item (FFL, Caliber/Gauge, or Master Firearm) is duplicated.

### Bugs/Fixes

Feature/Function	Description
Acquisition List	Modified the program so that if an FFL or Customer is selected from a list for the Acquisition, the cursor will move directly into the list of firearms, rather than being returned to the Name text box.
