

vBound 4.0.4 – Release Notes

Release Date: 2/18/16

Enhancements

Feature/Function	Description
Inventory Function	Added a new function to manage the process of doing an inventory of on-hand firearms. Each firearm has an "Inventory Flag" that can be used to check off or mark items during an inventory. The flags can be all cleared, manually checked, scanned or typed individually through an entry screen, or imported from a batch file. An Inventory Report can be printed, and the data can be exported to Excel.
Multiple Sales Report	Added the capability to create a Multiple Sales Report across all books in vBound. Prior version limited the report to only the current book. You now have a choice to run for just the current book OR across all books.
Correct/Void Wizard	Added the capability to "un-Dispose" a firearm. If a firearm has been dispositioned, the 'Disposition' page on the wizard now has a checkbox that can be used to remove all the disposition information, effectively moving the firearm back to being "on-hand". As always, an audit trail is established showing this correction to the firearm.
Inquiry	Firearm Cost and Firearm Retail have been added to the Inquiry list. They are now included in the Excel data file that can be exported as well.

Bugs/Fixes

Feature/Function	Description
Reprints	Modified both Acquisition Report and Disposition Report to fix issue where VOIDED items would still be included if a report was reprinted after a correction was made.
Disposition Report	When firearm(s) disposed to a person (not an FFL) the name was displaying as LAST MIDDLE LAST. Modified to correctly show FIRST MIDDLE LAST.
eBound Import	Adjustments to internal acquisition numbers will be made to avoid any duplicate internal numbering.
4473 Numbering	Added checks to ensure no characters can be entered in the numbers only field.
Application	Various modifications to fix spelling errors, improve the look of a form/report, change wording, etc.
